

(57) Abstract

The invention relates to sulphonamide derivatives of formula (I),

5

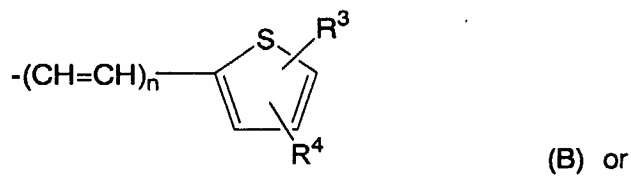

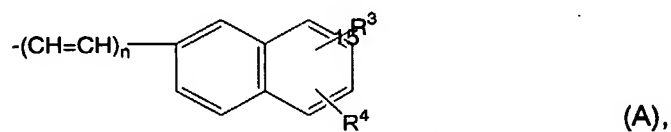

where

R_C is optionally substituted 4-6-membered heterocyclic ring containing one or more N atoms, or

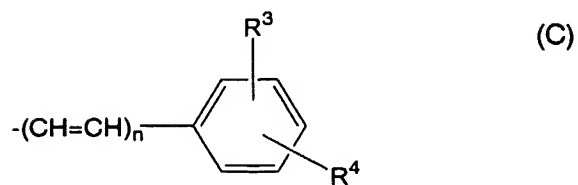

R_C forms together with the phenyl ring to which it is attached a benzodioxolyl group, or

10 R_C is $-NR^1R^2$,

R_A is a group having the formula

20

R_B is hydrogen or alkyl.

The invention also relates to the use of derivatives of formula (I) as inhibitors for collagen receptor integrins and a process for preparing sulphonamides of formula (I).
